

PHYSICS

TAS-101/ TAS-201
(Revised w.e.f. 2004-05)

L T P
3 1 0

Unit – I : Relativistic Mechanics

Inertial and Non-inertial Frames, Michelson-Morley Experiment, Postulates of Special Theory of Relativity, Galilean and Lorentz Transformation, Length Contraction and Time Dilation, Addition of Velocities, Mass Energy Equivalence and Variation of Mass with Velocity. 6

Unit – II : Interference

Coherent Sources, Conditions of Interference, Fresnel's Biprism Experiment, Displacement of Fringes, Interference in Thin Films – Wedge Shaped Film, Newton's Rings. 4

Diffraction : Single and n-Slit Diffraction, Diffraction Grating, Raleigh's Criterion of Resolution, Resolving Power of Telescope, Microscope and Grating. 5

Unit – III : Polarization

Phenomenon of Double Refraction, Ordinary and Extra-ordinary Rays, Nicol Prism, Production and Analysis of Plane, Circularly and Elliptically Polarized Light, Fresnel Theory, Optical Activity, Specific Rotation, Polarimeter. 5

Laser : Principle of Laser Action, Einstein's Coefficients, Construction and Working of He-Ne and Ruby Laser. 3

Unit – IV : Electromagnetics

Ampere's Law and Displacement Current, Maxwell's Equations in Integral and Differential Forms, Electromagnetic Wave Propagation in Free Space and Conducting Media, Poynting Theorem. 5

Magnetic Properties of Materials

Basic Concept of Para-, Dia and Ferro-Magnetism, Langevin's Theory of Diamagnetism, Phenomenon of Hysteresis and Its Applications 4

Unit – V : X-Rays

Diffraction of X-Rays, Bragg's Law, Practical Applications of X-Rays, Compton Effect. 3

Wave Mechanics : Wave Particle Duality, de Broglie Concept of Matter Waves, Heisenberg Uncertainty Principle, Schrödinger Wave Equation and Its Applications: Particle in a Box and One Dimensional Harmonic Oscillator. 5

5. O.Svelto : Lasers
6. D.J. Griffith : Electrodynamics

CHEMISTRY

TAS-102/TAS-202

L T P
3 1 0

[Revised w.e.f. 2004-2005]

Unit – I

1. Molecular theory of diatomic heteromolecules, Bond theory of bonding in metals, Hydrogen bonding.
2. Solid state Chemistry:

Radius Ratio Rule, Space lattice (only cubes), Type of unit cell, Bragg's Law, Calculation of Density of unit cell.

One & Two Dimensional solids, graphite as two dimensional solid and its conducting properties. Fullerene & its applications.

Unit-II

1. Basic principles of spectroscopic methods. The use of UV, Visible, IR, ¹H NMR, for the determination of structure of simple organic compounds.

2. Characteristics and classification of polymers.
3. Structures of the following polymers, viz, Natural and synthetic rubbers, Polyamide and Polyester fibres, polymethylmethacrylate, poly acrylonitrile and polystyrene. A brief account of conducting polymers (polypyrrole & polythiophene) & their applications.

Unit-III

1. Stability of reaction intermediates, e.g. Carbanion, Carbocation and free radicals. Types of organic reactions, & Mechanism of nucleophilic substitution reaction.
2. Mechanism of the following reactions.
 - (i) Aldol condensation. (ii) Cannizzaro reaction (iii) Beckmann rearrangement (iv) Hofmann rearrangement, and (v) Diels-Alder reaction
3. E-Z Nomenclature. Optical Isomerism of organic Compounds containing one chiral center. Examples of optically active compounds without chirality. Conformations of butane.

Unit-IV

1. Order & Molecularity of reactions. First & Second order reactions. Energy of activation.
2. Phase Rule: Its application to one component system (Water).
3. Equilibrium Potential, electrochemical cells (galvanic & concentration cells), Electrochemical theory of corrosion & protection of corrosion.

Unit-V

1. Hardness of water, softening of water by Lenny-S process & Reverse osmosis. Treatment of boiler feed water by Calgon process, Zeolites and ion-exchange resins.
2. Classification of fuels, Coal, Biomass & Biogas. Determination of gross and net calorific values using Bomb Calorimeter.
3. Environmental pollution : Types of pollution & pollutants, Air Pollution. Formation and depletion of ozone, smog and Acid rain.

References :

1. Organic Chemistry (Morrison & Boyd)
2. Inorganic Chemistry (I.D. Lee)
3. Physical Chemistry (Barrow)
4. Environmental chemistry (Manahan)

PROFESSIONAL COMMUNICATION

TAS-103

[Effective from the session : 2004-05]

Unit – I : Technical Communication

8

Nature; Origin and Scope; Feature and General Writing; Significance; Style: Objective Style as Contrary to Literary Composition.

Forms of Technical Communication:

Reports: Types, Significance, Structure & Style of Report;

Writing of Reports: Project, Thesis, Dissertation Writing;

Technical Paper & Scientific Article Writing: Elements, Methods & Technical Objectives;

Technical Proposal: Nature, Divisions, Kinds, Uses.

Unit-II : Pre-Requisites of Technical Written Communication

9

Vocabulary Building : Homophones (Words Similar in sound but different in Meanings); Word-formation; One-Word substitute; New & Select Vocabulary Building (about 500 words)

Functional Grammar : Patterns and Correct usage (Parts of speech); Syntax Concord; Prepositions; Articles.

Requisites of Good Sentence and Paragraph Writing: Requisites of Good Sentence Writing; Paragraph Writing; Unity, Coherence and Emphasis; Development of Paragraph: Inductive Order, Deductive Order, Spatial, Linear, Chronological Orders etc. with Emphasis on Argumentative & Expository Writing.

Unit : III : Business Correspondence: Principles; Features; Sales and Credit Letters: Letters of Enquiry, Quotation, Order, Claim, Complaint and Adjustment letters, Bio-Data Making, Resumes/Job Application Processing.

7

Unit-IV : Language Learning Through Thematic and Value based Critical Reading (Non-Detailed Text Study) :

A Study of following Value-Oriented Essays:

A.L.Basham	:	The Heritage of India
S. Radhakrishnan	:	<i>The Gandhian Outlook</i>
Francis Bacon	:	<i>Of Studies</i>
J.B. Priestley	:	Making Writing Simple
Virginia Woof	:	How should one Read a Book
R.K. Narayan	:	<i>A Bookish Topic</i>
C.E.M. Joad	:	The Civilization of Today

Study of following Short Stories for making the Students acquaint with the styles of great Writers of World:

O.H. Henry	:	The Gift of the Magi
R.N. Tagore	:	The Renunciation
Katherine Mansfield	:	<i>The Fly</i>
A.P. Chekhov	:	<i>The Lament</i>
M.R. Anand	:	The Barber's Trade Union
Ruskin Bond	:	The Eyes Are Not Here
D.H. Lawrence	:	The Rocking Horse Winner
Ernest Hemingway	:	The Capital of the World

Unit-V : Dimensions of Spoken English: Using English Language Laboratory :

6

Stress, Intonation, Rhythm, Phonemes, Allophones, Phonetic Transcription, Listening, Reading & Comprehension of Speech and Reproduction of Response.

MATHEMATICS-I

TAS-104

Unit - I : Matrices

9

Elementary row and column transformation, Rank of matrix, Linear dependence, Consistency of linear system of equations, Characteristic equation, Caley-Hamilton Theorem, Eigen values and eigen vectors, Diagonalisation, Complex and unitary matrices .

Unit - II : Differential Calculus-I

8

Leibnitz theorem, Partial differentiation, Euler's theorem, Curve tracing, Change of variables, Expansion of function of several variables

Unit - III : Differential Calculus-II

7

Jacobian, , Approximation of errors, Extrema of functions of several variables, Lagrange's method of multipliers (Simple applications).

Unit - IV : Multiple Integrals

7

Double and triple integral, Change of order, Change of variables, Beta and Gamma functions, Application to area, volume, Dirichlet integral and applications.

Unit - V : Vector Calculus

7

Point functions, Gradient, divergence and curl of a vector and their physical interpretations, Line, Surface and Volume integrals, Green's, Stokes and Gauss divergence theorem.

ELECTRICAL ENGINEERING

TEE-101/TEE-201

(Revised : with effect from session 2002-2003)

L T P
3 1 0

Unit-I

1. Steady State Analysis of A.C. Circuits :

Sinusoidal and phasor representation of voltage and current: single phase a.c. circuit-behaviour of resistance, inductance and capacitance and their combination in series & parallel and power factor, series parallel resonance-band width and quality factor : magnetic circuit. 8

Unit-II

2. D.C. Network Theory :

Circuit theory concepts-Mesh and node analysis.

Network Theorems- Super-position theorem. Thevenin's theorem, Norton's theorem, Maximum Power Transfer theorem, Star Delta transformation.

3. Measuring Instruments:

Construction and principle of operation of voltage and current measuring instruments; introduction to power and energy meters. 8

Unit-III

4. Three Phase A.C. Circuits :

Star-Delta connections, line and phase voltage/current relations, three phase power and its measurement.

5. Transformer :

Principle of operation, types of construction, phasor diagram, equivalent circuit, efficiency and voltage regulation of single phase transformer, O.C. and S.C. tests. 9

Unit-IV

6. D.C. Machines

Principle of electromechanical energy conversion, types of d.c. machines, E.M.F. equation, Magnetization and load characteristics, losses and efficiency, speed control d.c. motors, applications.

7. Three phase Synchronous Machines :

Principle of operation and application of synchronous motor. 8

Unit-V

8. Three phase induction Motor

Principle of operation, types and methods of starting, slip-torque characteristics, applications.

9. Single phase Induction Motor :

Principle of operation, methods of starting. 7

MECHANICAL ENGINEERING

TME-101/201

[Effective from the session : 2004-05]

A. THERMODYNAMICS

Unit – I : Fundamental Concepts and Definitions

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view. Density, specific volume, pressure, temperature. Thermodynamic equilibrium, property, state, path, process, cyclic process, Energy and its form, work and heat, Enthalpy. 3

Laws of thermodynamics

Zeroth law: Concepts of Temperature, zeroth law. 1

First law: First law of thermodynamics. Concept of processes, flow processes and control volume, Flow work, steady flow energy equation, Mechanical work in a steady flow of process. 2

Second law: Essence of second law, Thermal reservoir, Heat engines. COP of heat pump and refrigerator. Statements of second law. Carnot cycle, Clausius inequality. Concept of Entropy. 3

Unit – II : Properties of steam and thermodynamics cycles:

Properties of steam, use of property diagram, Steam-Tables, processes involving steam in closed and open systems. Rankine cycle.	4
Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle, Diesel cycle.	3

B. MECHANICS AND STRENGTH OF MATERIALS

Unit-III : Force system and Analysis

Basic concept: Laws of motion. Transfer of force to parallel position. Resultant of planer force system. Free Body Diagrams, Equilibrium and its equation.	4
---	---

Friction: Introduction, Laws of Coulomb friction, Equilibrium of bodies involving dry friction-Belt Friction.	2
--	---

Unit-IV : Structure Analysis

Beams: Introduction, Shear force and Bending Moment, shear force and Bending Moment Diagram for statically determinate beams.	4
--	---

Trusses: Introduction, Simple Trusses, Determination of Forces in simple trusses members, methods of joints and method of section.	3
---	---

Unit-V : Stress and Strain Analysis

Simple stress and strain: Introduction, Normal shear stresses, stress-strain diagrams for ductile and brittle materials, Elastic constants, one dimensional loading of members of varying cross sections, strain Energy.	3
---	---

Compound stress and strains: Introduction, state of plane stress, Principal stress and strain, Mohr's stress circle.	2
---	---

Pure Bending of Beams: Introduction, Simple Bending theory, Stress in Beams of different cross sections.	2
---	---

Torsion: Introduction, Torsion of Shafts of circular section, Torque and Twist, Shear stress due to Torque.	2
--	---

ELECTRONICS ENGINEERING

TEC-101/ TEC-201

[Effective from the session : 2004-05]

Unit – I

Semiconductor materials and properties

Group-IV materials, Covalent bond, electron-hole concepts	1
Basic concepts of energy bands in materials, concept of forbidden gap	2
Intrinsic and extrinsic semiconductors, donors and acceptors impurities	1

Junction diode

p-n junction	1
depletion layer	1
v-i characteristics, diode resistance, capacitance	1
diode ratings (average current, repetitive peak current, non-repetitive current, peak-inverse voltage).	1

Unit-II

Diode Applications

rectifiers (half wave and full wave)	1
calculation of transformer utilisation factor and diode ratings,	1
filter (C-filter), calculation of ripple factor and load regulation	2
clipping circuits, clamping circuits, voltage multipliers	2

Breakdown diodes

breakdown mechanisms (zener and avalanche)	1
--	---

breakdown characteristics, zener resistance, zener diode ratings	1
zener diode application as shunt regulator	2
Unit-III	
Bipolar Junction Transistor	
Basic construction, transistor action	1
CB, CE and CC configurations, input/output characteristics	2
Biasing of transistors-fixed bias, emitter bias, potential divider bias, comparison of biasing circuits	2
Transistor Amplifier	
Graphical analysis of CE amplifier, concept of voltage gain, current gain	2
h-parameter model (low frequency), computation of A_i , A_v , R_i , R_o of single transistor CE and CC amplifier configurations.	2
Unit-IV	
Field Effect Transistor	
JFET: Basic construction, transistor action, concept of pinch off, maximum drain saturation current, input and transfer characteristics, characteristic equation CG, CS and CD configurations, fixed-, self-biasing	3
MOSFET: depletion and enhancement type MOSFET-construction, operation and characteristics.	2
Computation of A_v , R_i , R_o , of single FET amplifiers using all the three configurations	1
Unit-V	
Switching theory and logic design	
Number systems, conversion of bases	5
Boolean algebra, logic gates, concept of universal gate, canonical forms.	2
Minimisation using K-map	1
Operational Amplifiers	
Concept of ideal operational amplifiers, ideal op-amp parameters, inverting, non-inverting and unity gain amplifiers, adders, difference amplifiers, integrators	2
Books and reference:

INFORMATION TECHNOLOGY

TIT-101/TIT-201

[Effective from the Session : 2004-05]

L T P
3 1 0

Unit – I : Fundamental Concept of Information

Information Concept and Processing:

Definition of information, Data Vs Information, Introduction to Information representation in Digital Media, Text, image, graphics, Animation, Audio, Video etc., Need, Value and Quality of information, Concept of Information Entropy, Shannon's Principles, Entropy of Information, use of Entropy in Coding, Static & Dynamic codes, Category and Level of Information in Business Organization.

Information Representation:

Information Content, Entropy, Data Compression, Shannon Fano, Huffman Coding, Extended Huffman Codes, Arithmetic Coding, LZ78, LZW coding, Introduction to JPEG, MPEG, MHEG and other IT Industry Standards.

Unit-II : Concepts in Computer & Programming

Computer Appreciation:

Definition of Electronic Computer, History, Generations, Characteristic and Application of Computers, Classification of Computers, RAM/ROM, Computer Hardware, CPU, Various I/O devices, Peripherals, Storage Media, Software Definition, Role and Categories, Firmware and Humanware.

Programming Language Classification & Program Methodology:

Computer Languages, Generation of Languages, Translators-Interpreters, Compiler/Interpreters, Compilers, Flow, Charts, Dataflow Diagram, Assemblers, Introduction to 4GLs, Software Development Methodology, Life Cycles, Software Coding, Testing, maintenance, ISO, CMM standards for IT industry.

UNIT : III : Digital Devices and Basic Network Concepts

Digital Fundamentals:

Various codes, decimal, binary, hexa decimal conversion, floating numbers gates, flip flops, adder, multiplexes, need for Data Transmission over distances, Types of Data Transmission, Media for Data Transmission, Modulation, AM, FM, Digital Modulation, Multiplexing of Signals

Data Communication & Networks:

Computer Networks, Networking of computers- Introduction of LAN and WAN. Network Topologies, Basic Concepts in Computer Networks, Client-server Architecture, ISDN, ATM, Token based protocol, CSMA/CD, Mobile Communication.

UNIT-IV : Internet and Web Technologies

Internet & World Wide Web:

Hypertext Markup Language, DHTML, WWW, Gopher, FTP, Telnet, Web Browsers, Net Surfing, Search Engines, Email, ISP, EDI, E-Commerce, Public Key Private Key, Safety of Business Transaction on web.

Web Technologies:

Elementary Concepts of E-Commerce, Basic Infrastructures for E-Commerce, Electronic Token, Security Threats, Electronic Payment Systems, Digital Signatures, Network, Security, Firewall, Introduction to Web Technologies.

UNIT-V : Concepts in Operating System, Office Tools and Data Management

Introductory concepts in operating system & Data Management:

Elementary Concepts in Operating System, textual Vs GUI Interface, Introduction to DOS, MS Windows, MS office Tools, MS WORD, MS EXCEL, MS Power Point, Tools for Data Management, Basics of Database management system, Introduction to basic Commands of Dbase, Foxpro, SQL Etc.

IT Industry Trends, Careers and Applications in India:

Scientific, Business, Educational and Entertainment Application, Industry Automation, Weather Forecasting, Awareness of Ongoing IT projects in India NICNET, BRNET etc. Application of IT to other Areas E Commerce, electronic governance, Multimedia, Entertainment.

ENVIRONMENTAL STUDIES

TES - 201

**L T P
3 1 0**

Unit-I :

The Multidisciplinary nature of environmental studies

2

Definition, scope and importance, Need for public awareness

Natural Resources

6

Renewable and non-renewable resources

Natural resources and associated problems.

- (a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
 - (b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
 - (c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
 - (d) Food resources: World food problem, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
 - (e) Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.
 - (f) Land resources: Land as resource, land degradation, man induced landslides, soil erosion and desertification.
- Role of an individual in conservation of natural resources.

- Equitable use of resources for sustainable lifestyles.

Unit-2 : Ecosystems

6

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem.
- Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem:
 - (a) Forest ecosystem
 - (b) Grassland Ecosystem
 - (c) Desert ecosystem
 - (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit-3 : Biodiversity and its conservation

7

Introduction- Definition : genetic, species and ecosystem diversity, Biogeographical classification of India, Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation, Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation of biodiversity: In-situ Ex-situ conservation of biodiversity.

Unit-4 : Environmental Pollution

8

Definition

- Causes, effects and control measures of-
 - (a) Air Pollution.
 - (b) Water Pollution.
 - (c) Soil Pollution
 - (d) Marine Pollution.
 - (e) Noise Pollution.
 - (f) Thermal Pollution.
 - (g) Nuclear hazards.
- Solid waste Management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution.
- Pollution case studies.
- Disaster management: floods, earthquake, cyclone and landslides.

Unit-5: Social Issues and the Environment

5

From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people; its problems and concerns. Case Studies, Environmental ethics: Issues and possible solutions, Wasteland reclamation, Consumerism and waste products, Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness.

Human Population and the Environment

4

Population growth, variation among nations, Population explosion- Family Welfare Programme, Environment and human health, Human Rights, Value Education., HIV/AIDS, Women and Child Welfare, Role of Information Technology in Environment and human health, Case Studies.

Suggested Field work

Visit to local area to document environmental assets-river/forest/grassland/hill/mountain, Visit to a local polluted site-Urban/Rural /Industrial / Agricultural, Study of common plants, insects, birds, Study of simple ecosystems-pond, river, hill slopes etc

MATHEMATICS II

TAS-204

- Unit - I : Differential Equations** **8**
 Ordinary differential equations of first order, Exact differential equations, Linear differential equations of first order, Linear differential equations of nth order with constant coefficients, Complementary functions and particular integrals, Simultaneous linear differential equations, Solutions of second order differential equations by changing dependent and independent variables, Method of variation of parameters, Applications to engineering problems (without derivation).
- Unit - II : Series Solutions and Special Functions** **8**
 Series solutions of ODE of 2nd order with variable coefficients with special emphasis to differential equations of Legendre, and Bessel . Legendre polynomials, Bessels functions and their properties.
- Unit - III : Laplace Transform** **7**
 Laplace transform, Existence theorem, Laplace transform of derivatives and integrals, Inverse Laplace transform, Unit step function. Dirac delta function, Laplace transform of periodic functions, Convolution theorem, Application to solve simple linear and simultaneous differential equations.
- Unit - IV : Fourier Series and Partial Differential Equations** **8**
 Periodic functions, Trigonometric series, Fourier series of period 2π , Eulers formulae, Functions having arbitrary period, Change of interval, Even and odd functions, Half range sine and cosine series.
 Introduction of partial differential equations, Linear partial differential equations with constant coefficients of 2nd order and their classifications - parabolic, elliptic and hyperbolic with illustrative examples.
- Unit - V : Applications of Partial Differential Equations** **7**
 Method of separation of variables for solving partial differential equations, Wave equation up to two-dimensions, Laplace equation in two-dimensions, Heat conduction equations up to two-dimensions, Equations of transmission Lines.

PHYSICS PRACTICALS

TAS-151/TAS-251
(Revised w.e.f. 2004-05)

L T P
2 1 0

List of Experiments (Any Ten)

1. To determine the wavelength of monochromatic light by Newton's ring.
2. To determine the wavelength of monochromatic light with the help of Fresnel's biprism.

3. To determine the focal length of two lenses by nodal slide and locate the position of cardinal points.
4. To determine the specific rotation of cane sugar solution using half shade polarimeter.
5. To determine the wavelength of spectral lines using plane transmission grating.
6. To determine the specific resistance of the material of given wire using Carey Foster's bridge.
7. To determine the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of the coil.
8. To verify Stefan's Law by electrical method.
9. To calibrate the given ammeter and voltmeter.
10. To study the Hall effect and determine Hall coefficient, carrier density and mobility of a given semiconductor material using Hall-effect set up.
11. To determine energy band gap of a given semiconductor material.
12. To determine E.C.E. of copper using Tangent or Helmholtz galvanometer.
13. To draw hysteresis curve of a given sample of ferromagnetic material and from this to determine magnetic susceptibility and permeability of the given specimen.
14. To determine the ballistic constant of a ballistic galvanometer.
15. To determine the viscosity of a liquid.

Note : Additional experiments may be added based on contents of syllabus.

CHEMISTRY PRACTICALS

TAS-152/TAS-252

LIST OF EXPERIMENTS

[Revised w.e.f. 2004-2005]

L T P

0 0 2

1. Determination of alkalinity in the given water sample.
2. Determination of temporary and permanent hardness in water sample using EDTA as standard solution.
3. Determination of available chlorine in bleaching powder.
4. Determination of chloride content in the given water sample by Mohr's method.
5. Determination of iron content in the given ore by using external indicator
6. pH-metric titration.
7. Determination of Equivalent weight of Iron by the chemical displacement method. The equivalent weight of copper is 63.5

(Note : the procedure to be followed in carrying the above experiment is given as annexure)

8. Viscosity of an addition polymer like polyster by Viscometer.
9. Determination of iron concentration in sample of water by colorimetric method. The method involves the use of KCNS as colour developing agent and the measurements are carried out at λ_{\max} 480 nm.

Note : The general procedure of estimation is given on pp653-8 of the textbook of Quantitative Chemical Analysis by A.I. Vogel 6th Edition, Publisher : Pearson education Ltd. 2000)

10. Element detection & functional group identification in organic compounds

Annexure

In this experiment we will determine the equivalent weight of Iron, which displaces one equivalent of copper (63.5 g) from a solution containing copper ions.

Procedure: Clean a sample of iron (strip measuring 3.5cm×1.5cm) with a sand paper and weigh it accurately. Place it in a clean beaker (250ml) and pour into it 100ml of CuSO₄ solution of known strength (~ N/10) Allow the strip to stand in the beaker for about 30 minutes. Carefully withdraw the strip of iron (from the beaker) with a forceps and place it on a porcelain plate contained in a desiccator (using CaCl₂ as a desiccant). The quantity of copper sulphate remaining in solution – after the chemical displacement, is estimated by Iodometric titration method. The dried strip of iron (containing the deposited copper) is then carefully weighed.

Observations:

Weight of iron strip =g

Wt. Of iron strip + copper =g

(after drying)

wt. of copper deposited on iron strip \Rightarrow

Initial conc. of cu- final conc. of cu. (determined by titration)

The weight of iron, which goes into solution(as Fe So₄)

\Rightarrow (Initial weight of iron strip + weight of deposited copper) - weight of iron strip along with copper (after drying)

$$\frac{\text{Eq.wt. of copper}}{\text{Eq. Wt. of Iron}} (63.5) = \frac{\text{Wt. of Copper Deposited}}{\text{Wt. of Fe}_{(s)} \text{ (going into solution)}}$$

The Eq. Wt. of Fe = ?

The % error involved in the experiment =.....

ELECTRICAL ENGINEERING LAB **TEE-151 / TEE 251**

L T P
0 0 2

List of Practicals

A minimum of 10 experiments from the following :

1. Verification of Network Theorems.
2. Study of diode characteristics.
3. To study a half wave and full wave rectifier circuit with and without capacitor filter and determine the ripple factor.
4. Determination of Common base and common emitter characteristics of a transistor.
5. Study of phenomenon of resonance in RLC series circuit.
6. Measurement of power in a three phase circuit by two wattmeter method.
7. Measurement of efficiency of a single phase transformer by load test.
8. Determination of parameters and losses in a single phase transformer by OC and SC test.
9. DC generator characteristics.
10. Speed control of dc shunt motor.
11. Study running and reversing of a three phase induction motor.
12. Study of a single phase energy meter.
13. To study the various logic gate (TTL).

Additional experiments may be added based on contents of syllabi.

MECHANICAL ENGINEERING LAB **TME-151 / TME 251**

L T P
0 0 2

List of Practicals

1. Study of boiler models - Babcock Wilcox, Lancashire and Locomotive.
2. Study of Steam engine and steam turbine models.
3. Study of 2-stroke and 4-stroke I.C.E. models.
4. Study of Fiat engine and/ or Diesel engine prototype.

5. Study of a vapour compression Refrigeration unit tutor/refrigerator.
6. Study of a window type air conditioner.
7. To conduct the tensile test on a UTM and determine ultimate Tensile strength, percentage elongation for a steel specimen.
8. To conduct the compression test and determine the ultimate compressive strength for a specimen.
9. To conduct the Impact test (Izod / charpy) on the Impact testing machine and to find the impact strength.
11. To determine the hardness of the given specimen using Brinell / Rockwell / Vicker testing machine.

COMPUTER PROGRAMMING LAB

TCS 151 / TCS 251

L T P
0 0 2

List of Practicals

1. Practice of all internal and External DOS Commands
2. Write simple batch program
3. Giving exposure to Windows environment
4. File and program management in windows
5. Practice of all UNIX commands
6. Write simple shell script
7. Introduction to text editing and word processing
8. Exposure to advance feature supported by some editors
9. Net Surfing
10. Creation and usage of E-mail account
11. Write small program using C language
12. Handling of data structure in C
13. Familiarizing mail account using PINE, deleting, creating folder/ mail-messages, adding signature, creating directory of addresses.

Note : List may be modified according to new software available.

WORKSHOP PRACTICE

TWS-151/251

L T P
0 0 2

1. **Carpentry Shop:** 1. Study of tools and operation and carpentry joints. 2. Simple exercise using jack plain. 3. To prepare half-lap corner joint, mortise and tennon joints. 4. Simple exercise on woodworking lathe.
2. **fitting Bench Working Shop :** 1. Study of tools and operations 2. Simple exercises involving filling work. 3. Making perfect male-female joint 4. Simple exercise involving drilling/tapping/dieing.
3. **Black Smithy Shop :** 1. Study of tools and operations 2. Simple exercises based on black smithy operations such as upsetting, drawing down, punching, bending, fullering & swaging.
4. **Welding Shop :** 1. Study of tools and operations . 2. Simple butt joint. 3. Lap joint. 4. oxy acetylene welding.
5. **Sheet metal shop :** 1.Study of tools and operations. 2. Making funnel complete with soldering. 3. Fabrication of tool box, tray, electrical panel box etc.
6. **Machine Shop :** 1. Study of tools and operations. 2. Plane turning. 3. Step turning. 4. Taper turning 5. Threading. 6. Single point cutting tool grinding.

ENGINEERING GRAPHICS

TCE 151

L T P
0 0 2

1. **Introduction**
Graphics as a tool to communicate ideas, Lettering and dimensioning, Construction of geometrical figures like pentagon and hexagon. 2
2. **Orthographic Projection**
Principles of orthographic projections, Principal and auxiliary planes, First and Third angle projections. 1
Projection of points. Pictorial view. 1
Projection of lines parallel to both the planes. Parallel to one and inclined to other, Inclined to both the planes. Application to practical problems. 3
Projection of solid in simple position, Axis or slant edge inclined to one and parallel to other plane, Solids lying on a face or generator on a plane. 2
Sectioning of solids lying in various positions, True shape of the section. 2
Development of lateral surfaces, sheet metal drawing. 1
3. **Isometric Projection**
Principles of isometric projection, Isometric projection using box and offset methods. 2

TAS-253 : COMMUNICATION LAB (ENGLISH)

- (i) Orientation to Speech Sounds through International Phonetic Alphabets (I.P.S.) : British Received Pronunciation.
- (ii) Speech Drills with Emphasis on Articulatory Phonetics, Place and Manner.

LIST OF PRACTICALS

Stress in Speech: Based on Accentual Patterns.
Intonation-Pattern-Practice: Rising, Falling and Level-Tones.
Rhythm in Speech-Practices On Strong and Weak-form Words.
Individual Conferencing / Speaking along with Quizzes.
Conversational Skills for Interview/ Seminars / Workshops with Emphasis on Kinesis along with Promotion of Phonetic-Script-Skills.
Group-Discussion: Practices based on Accurate & Current Grammatical Patterns.
Official / Public Speaking : Practices based on Mechanics of Articulation.
Theme Presentation-Practices Based on Linguistic Patterns.
Developing Argumentative Skills/ Role-Play Presentations with Proper Rhythmic Stress.
Testing comprehension : Reading and Listening Exercises with the use of Audio-Visual Aids.
Audience-based, Effective Speech Production (Elocution)

TAS 301: MATHEMATICS III

L : T: P
3 : 1: 0

Unit - I : Integral Transforms

8

Fourier integral, Fourier complex transform, Fourier sine and cosine transforms and applications to simple heat transfer equations.

Z – transform and its application to solve difference equations.

Unit - II : Functions of a Complex Variable - I	9
Analytic functions, C-R equations and harmonic functions, Line integral in the complex plane, Cauchy's integral theorem, Cauchy's integral formula for derivatives of analytic functions, Liouville's theorem, Fundamental theorem of algebra.	
Unit - III : Functions of a Complex Variable - II	8
Representation of a function by power series, Taylor's and Laurent's series, Singularities, zeroes and poles, Residue theorem, evaluation of real integrals of type $\int_0^{2\pi} f(\cos\theta, \sin\theta) d\theta$ and $\int_{-\infty}^{+\infty} f(x) dx$, Conformal mapping and bilinear transformations.	
Unit - IV : Statistics and Probability	8
Moments, Moment generating functions, Skewness, Kurtosis, Correlation and Regression, Binomial distribution, Poisson distribution, Normal distribution.	
Unit - V : Curve Fitting and Solution of Equations	5
Method of least squares and curve fitting of straight line and parabola, Solution of cubic and bi-quadratic equations.	

TCY-301: CHEMISTRY-I

L : T: P
3 : 1: 0

Unit -I	
IUPAC nomenclature: E-Z,R-S bicyclic alkanes , hetrocycles aliphatic and aromatic compounds: Application of Grignard reagent, lithium aluminum hydride.	
	7
Unit-II	
Stereoisomerism: Geometrical isomerism with and without chirality, concept of aromaticity directive influence of substitute.Criteria & techniques of purity of compounds. Melting point ,Boiling point , recrystallisation , various distillations.	
	7
Unit-III	
Reactions , Synthesis & mechanism: Hydrocarbons including cyclic , alcohol, phenols , aldehyde& ketones, carboxylic acids & their derivatives, halides , nitro, amino & diazo compounds.	
	10
Unit-IV	
Conformational analysis: Various terms , conformation analysis of ethane , cyclohexane & 1,2 disubstituted cyclohexane Heterocyclic: Classification, preparation and properties of pyridine.	
	10
Unit-V	
Bimolecules: Structures & reactions of mono & disaccharides, proteins & natural polymers.	
	6

TCH-307: FLUID FLOW AND SOLID HANDLING

L : T: P
3 : 1: 0

Unit-I	
Solids and Their Handling	
Properties of solids ,screening, industrial screening equipment. Determination of particle size, screen analysis, size reduction of solids,stages of reduction , operating variables, intermediate and fine size reduction, power requirement and mechanism.	
Power driven machines: Crushers, grinders, and conveyors.	
	8
Unit -II	
Filtration: Theory, continuous and batch equipments. Flow of solids through fluids, classification and sedimentation.	
	8
Unit - III	
Fluid flow:	
Properties of fluids	
Fluid statics: Euler's equation, Hydrostatic Law and Pressure Measurement	
Transport of fluids, energy relationships, pipe fittings, minor losses in pipe flow	
	8
Unit IV	
Flow measurements: Orifice meter. Nozzle and venturi meters, rotameter and pitot tube.	
	8

Unit V

Pumping and compressing: reciprocating pumps, rotary pumps, centrifugal pumps and blowers. Introduction to fluidization. 8

1. To Determine size distribution of sample crushed in a dodge crusher
2. To Determine efficiency of crushing of a roll crusher.
3. To determine surface area volume of a sample using screen analysis.
4. To Determine constants of filtration in case of rotary filter.
5. To Determine terminal velocity in case of hindered settling in sedimentation.
6. To Calibrate orificemeter
7. To Calibrate venturimeter.
8. To Calibrate rotameter.
9. To Verify Bernoulli equation.

TPT 301 : ELEMENTS OF SURFACE COATINGS, DRYING OILS, DRIERS & SOLVENTS

L T P
3 1 0

Unit-I

General introduction of paint industry, definition of paints, varnishes and lacquers their constitution and functions, general classification of surface coating, mechanism of film formation, Source and composition of oils, non-glyceride, components of oils, classification, extraction and refining of oils, 08

Unit-II

Processing of oils, like oxidation, hydrolysis, glycerolysis, saponification etc, and their evaluation. Characterization of oils. 06

Unit-III

Properties and uses of some commonly used drying, semi drying & non drying oils. Yellowing of oils. Modified oils like heat treated oils, Malenised oils, Copolymerised oils, Dehydrated castor oils, Isomerised oils, Segregated, Reconstituted oils etc, 08

Unit-IV

Introduction of driers, types of driers like primary, secondary and auxiliary. functions of metals as well as, acid part of driers, Mechanism of drying action, Manufacture of driers, their evaluation and recommendation for water based and solvent based coatings. Combination and dosage of driers. Properties of different metals as well as organic radicals of metal organic driers, 08

Unit-V

Solvents: types of volatile solvents, general properties; of solvents like solvent power, toxicity, rate of evaporation, Boiling point Aromatic content, etc, classification like true solvents, latent solvents and diluents, effect of solvent on film properties, classes of solvents with their sources, properties, evaluation of solvents, solubility parameters, 08

Reference Book

2. Surface Coatings, Vol, I & II by, OCCA, Australia
3. Outlines of Paint Technology by W. M. Morgan

TME-307 MECHANICS OF SOLIDS

L : T: P
3 : 1 : 0

Unit-I

Simple stress and strain ; Normal stress and strain; Elastic materials- Hook's Law; Modulus of elasticity- Young's modulus; Tensile test, Stress-Strain curves for important engineering materials; Ductile and Brittle materials; Poisson's ratio and its application to a two-dimensional stress system; Shear stress and strain; Modulus of rigidity; Allowable working stress, Factor of safety. 8

Unit-II

Stress concentration factor; Toughness; Creep and fatigue; Compound bars subjected to external loads; Simple bending theory; Shear force and Bending moment diagram for beams carrying concentrated and distributed loads; Points of contraflexure; Neutral axis; Section modulus; Second moment of area. 8

Unit-III

Slope and deflection of beams; Direct integration method; Macaulay's method; Energy method; Simple torsion theory; Polar record moment of area shear stress and strain in shafts; Torsion of hollow shafts; Torsion of thin walled tubes. 8

Unit-IV

Strain energy under uniaxial tension and compression; Biaxial state of stresses; Stresses on oblique planes; Principal stresses and strains; Mohr's stress circle; Bulk modulus; Volumetric strain. 8

Unit-V

Pressure vessels; Thin and thick cylinders; Hoop and longitudinal stresses; Lamé's theory; Buckling of columns: Euler's theory. 6

TCH-357 FLUID MECHANICS LAB

L : T: P

0 : 0 : 3

1. To determine experimentally the metacentric height of a ship model.
2. To verify the momentum equation experimentally.
3. To determine the coefficient of discharge of an orifice (or a mouth piece) of a given shape. Also to determine the coefficient of velocity and the coefficient of contraction of the orifice (or the mouth piece.).
4. To plot the flow net for a given model using the concept of electrical analogy.
5. To measure surface tension of a liquid.
6. To calibrate an orifice meter and study the variation of the coefficient of discharge with the Reynolds number.
7. To verify Darcy's law and to find out the coefficient of permeability of the given medium.
8. To study the transition from laminar to turbulent flow and to determine the lower critical Reynolds number.
9. To study the velocity distribution in a pipe and also to compute the discharge by integrating the velocity profile.
10. to study the variation of friction factor, 'f' for turbulent flow in smooth and rough commercial pipes.
11. To determine the loss coefficients for the pipe fittings.
12. To study the flow behaviour in a pipe bend and to calibrate the pipe bend for discharge measurement.
13. To study the boundary layer velocity profile and to determine boundary layer thickness and displacement thickness. Also to determine the exponent in the power law of velocity distribution.

TCY-351 CHEMISTRY-I LAB

L : T: P

0 : 0 : 3

1. Identification of liquid organic compounds.
2. Identification of two organic compounds (one water soluble and one water insoluble) in a mixture.
3. Minor estimation of phenol, glucose & aniline.
4. Preparation of p- Nitroacetanilide from Acetanilide.
5. Paper chromatography of organic compounds
6. Thin layer chromatography: Determination of R_f value & Separation of compounds.

TPT 351 : OIL BASED COATING MEDIA LAB

L : T: P

0 : 0 : 3

Physical testing of drying, semi-drying and non-drying oils such as colour, sp. gr., refractive index, etc. Determination of acid value, iodine value, etc. of oils. Determination of acid value of resins. Preparation of modified drying oils such as stand oil, boiled oils, blown oils, male oils, etc. preparation of driers. Testing of solvents & driers.

TAS-401: COMPUTER BASED NUMERICAL METHODS

L T P
3 1 0

Unit 1

Problem solving on computer. Algorithms and flow charts.

Introduction to numerical computing, approximations and errors in numerical computations. Truncation and round off errors, propagation of errors.

Root finding: bisection method, regula falsi method, iteration method, Newton Raphson method, Secant method, systems of nonlinear equations. 08

Unit 2

Matrix algebra, Solution of simultaneous linear algebraic equations: Gauss elimination, Gauss Jordan method, LU decomposition, Jacobi method, Gauss Seidel method, SOR method, convergence of iterative methods. Tridiagonal systems and Thomas algorithm, Condition of a system and stability issues. 06

Unit 3

Interpolation and Extrapolation: Newton's forward and backward interpolation formula, Lagrange interpolation formula. Divided differences and Newton's general formula.

Numerical differentiation, Numerical integration : Trapezoidal and Simpson's rules. Newton-Cotes integration formulas, Romberg integration, Gaussian Quadrature. 10

Unit 4

Numerical solution of O.D.E.: Taylor series method, Euler's method, Runge Kutta methods. Multistep methods: Milne's method, Adams method, accuracy, Convergence criteria, stiffness, systems of equations. 08

Unit 5

Boundary Value problems: Finite difference method, solving eigenvalue problems, polynomial method, power method. Numerical solution of Partial Differential equations. Elliptic, Parabolic and hyperbolic PDEs. 08

Chemical Kinetics : Kinetics of parallel side,opposite, consecutive and chain reactions, fast reactions fundamental aspect of kinetics of reactions in solution.

Unit-II

Catalysis : Acid basis catalysis, Enzyme catalysis, heterogeneous reactions. 6

Unit-III

21

Surface chemistry: adsorption, adsorption isotherms , surface tension and its determination .
Colloids chemistry : General preparation properties and classification hydrophilic and lypophobic sols.
Electrical and technique properties of solutions. 7

Unit-IV

Thermodynamic: Application of I st and II nd law of thermodynamics to chemical processes. Thermodynamic functions, F.A.S.K. their determination relations and physical significance

Unit-V

Colligative properties : Lowering of B>P. elevation in B.P . depression in F.P. Osmotic pressure and relation with molecular weight.

Electro chemistry : Cells their classification liquid junction potential , E.M.F. and thermodynamic functions relations. Application of E.M.F. measurements activity coefficient concept.

TCH-401: HEAT TRANSFER OPERATIONS

L : T: P
3 : 1 : 0

Unit-I

Introduction to heat transfer and general concepts of heat transfer by conduction , convection and radiation.

Conduction: Basic concepts of conduction in solids, liquids and gases , steady state temperature fields and one dimensional conduction without heat generation e.g. through plane walls, cylindrical and spherical surfaces , composite layers etc. Insulation materials , critical and optimum insulation thickness. Extended surfaces, fins and their practical applications . Introduction to unsteady state heat transfer. 8

Unit-II

Convection: Fundamentals of convection , basic concept of convection and definitions . Natural and forced convection, hydrodynamic and thermal boundary layers, laminar and turbulent heat transfer inside and outside tubes . Dimensional analysis, determination of individuals and overall heat transfer coefficients and their temperature dependence, heat transfer in molten metals. 8

Unit-III

Heat transfer with phase change : Condensation of pure and mixed vapors, film wise and drop wise condensation ,loading in condensers and basic calculation on condensers, heat transfer in boiling liquids, boiling heat transfer coefficients. 8

TCH - 407 : INDUSTRIAL FUELS AND PROCESS CALCULATIONS

L : T: P
3 : 1 : 0

Unit –I

Fuels: Origin, chemical composition, classification, storage, and general uses of industrial fuels. 8

Unit II

Types of solid fuels , proximate and ultimate analysis of coal, calorific values of fuels, specification of fuel oil. Types of gaseous fuels, control of combustion. Types of liquid fuels, petroleum and its distillation products, coal tar and its distillation products, modified and synthetic fuels, fuels for cryogenic engines. 8

Unit - III

Process calculations: Systems of units. Stoichometry and composition relations. Material balances, the use of ideal gas laws and vapour pressures, solubility and heat capacity data. 8

Unit-IV

Humidityand solvent recovery. Material balance for various unit operations like absorption, distillation, crystallization etc. 8

Unit-V

Thermochemistry and energy balances. Material and energy balances for typical processes. 8

TPT-401 : NATURAL RESINS & POLYMERS, PLASTICIZERS & ADDITIVES

L : T: P
3 : 1 : 0

Unit-I

Classification and properties of natural resins, Processing, of natural resin like copal congo etc, Rosin sources, oleoresin and its composition, Recovery of resin and turpentine from oleoresin, properties and deficiencies rosin film, modification of rosin - calcium rosinate, zinc and polymerised rosin, maleopimaric acid from rosine etc, identification of rosin. 08

Unit-II

Shellac: origin, extraction of lac, different kinds of lac and their props, composition of Lac, Chemical modification of shellac for use in coatings, french polish, leather finishes, oleoresinous varnishes etc from shallac, 08

Unit-III

Bitumin, pitches, gums and glues, natural bitumins like gilsonite and petroleum in Bit Pitches, general properties and uses of gums and glues : cellulose: source, properties, modification of cellulose for use in surface coatings like cellulose esters, ethers, water soluble cellulose derivatives, their properties, testing and uses in lacquers, putties etc, Rubber resins: sources of natural rubber, properties & modification of rubber like chlorinated rubber, cyclised rubber or Isomerised rubber, Their properties and uses, 08

Unit-IV

Plasticizers: definition, importance, mechanism of plasticisation, types of plasticizers with their properties, Evaluation of plasticizers. 06

Unit-V

Additives functions of additives, Additives for solvent thinned paints like wetting, and dispersing agents, antissettling, antisag and bodying agents antiskinning agents and antiflooding agents etc, additives for latex paints like surface-active agents, antifoam agents, thickening agents, preservatives, coalescing agents, etc. 10

TPT-503 : SYNTHETIC RESINS & POLYMERS

L : T : P

3 : 1 : 0

Unit 1

Fundamentals film formers, chemical structure of monomers, functionality and its determination, degree of polymerisation and molecular weight, non-convertible and convertible film formers, linear, branched and cross linked film formers, homopolymers and copolymers. 06

Unit II

Alkyd resins, raw materials, chemistry and formulation of various alkyds, carothers and its application, alkyd constant manufacturing processes classification, Properties and application of various type of alkyd, modification of alkyds such as copolymerised alkyds, natural and synthetic resin modified alkyds, water soluble alkyds, Polyester resin: saturated polyesters, components and formulation of unsaturated polyester resin, curing mechanism, Properties and application of polyester resin, water soluble polyesters; Phenolic Resins, Classification types of phenols used, reaction of phenol and formaldehyde, novolacs and cresols resin production properties and application of various phenolics water soluble phenolics, 10

Unit -III

Amino Resins: urea formaldehyde and melamine formaldehyde resin formulation of methylol products, alkylation and curing reaction, properties and application in surface coatings water soluble and other amino resins, epoxies chemistry of epoxy resins, epoxy resin manufacture, formulation of two pack system like solvent base coatings solvent less high solids and coating for epoxies, Single pack epoxies like epoxy ester thermoplastic epoxy etc, various epoxy modified resin and their application water soluble epoxies, polyamide resin, polyamines and acids used, dimerised fatty acids properties and application of various polyamides. 08

Unit-IV

Polyurethanes : various isocyanates used, reactions of the isocyanate group and their hazards, classification of Polyurethanes, properties and application of various single and two pack system; Silicone resin: synthesis of silicone, resins, structural properties relationship, modified silicones, properties and application of silicone resins. 08

Unit-V

Vinyl and acrylics: vinyl and acrylic monomers, types of vinyl resins used in surface coating Use vinyl copolymers and their properties, thermoplastic and thermosetting acrylics, water soluble acrylics; Hydrocarbon resins: cumerone and indene resin, resins from petroleum products, terpene resins; Miscellaneous resin: fluoropolymers, ketonic resin, polycarbonates etc, 08

Reference Book

1. Organic Coating Technology, Vol, I & II by H.F. Payne
2. Surface Coatings, Vol, I & II by, OCCA, Australia
3. Outlines of Paint Technology by W. M. Morgan

TPT– 551 : SYNTHETIC RESINS LAB

L : T: P

0 : 0: 6

Preparation of all types of alkyds and testing of their acid value & drying properties. Preparation of spirit & oil soluble phenolic resins and their testing. Preparation of UF of MF resin preparation of epoxy resins and finding its epoxy

Preparation & testing of WS alkyds and epoxies.

TPT– 552 : PIGMENTS LAB

L : T: P

0 : 0: 6

Testing of pigments and extenders such as texture, colour, tinting & strength, reducing power, oil absorption, residue on sieve, bulking value, moisture content, WS matter etc. Preparing various chrome pigment & Prussian blue.

TCH- : CHEMICAL ENGINEERING THERMODYNAMICS

L : T: P

3 : 1: 0

Unit-I

Basic Concept

The first law and conservation of energy. Applications to steady, nonsteady flow and other engineering problems. The second law. Applications to engineering problems relating to equilibrium, maximum and minimum work. 8

Unit-II

Properties of Pure Substances

Changes in thermodynamic properties and their inter-relationships. The ideal gas. Fugacity and Fugacity coefficients for real gases. 8

Unit-III

Multicomponent System

Partial molal properties. Mathematical models for the chemical potential. Ideal and non-ideal solutions. Activity and activity coefficients. The Gibbs Duhem equations. Excess properties of mixtures. 8

Unit-IV

Phase Equilibria

Criteria for equilibrium between different phases in Multicomponent nonreacting systems. Applications to systems of engineering interest, particularly to vapour – liquid equilibria and solubility. 8

Unit-V

Chemical Equilibrium

The equilibrium constant and the variation of yield in chemical reactions with pressure, temperature and composition. 8

TCH-607 : MASS TRANSFER OPERATIONS –II

L : T : P

3 : 1 : 0

Unit –I

Diffusion

Molecular and turbulent diffusion, diffusion coefficient. Fick's law of diffusion, measurement and estimation of diffusivity. Diffusion in multicomponent gas mixtures. Diffusion in solids: Molecular, Knudsen and surface diffusion.

Inter phase mass transfer: Mass transfer coefficients, diffusion between phases, equilibrium solubility of gases in liquids. Mass transfer theories. Mass transfer in fluidized beds. 8

Unit –II

Adsorption and Stripping

Equipments, gas-liquid equilibria, Henry's law, selection of solvent, absorption in tray column, graphical and analytical methods. Adsorption in packed columns. HTU, NTU & HETP concepts, design equations for packed column. 7

Unit –III

Humidification and Dehumidification

Vapour liquid equilibrium and enthalpy for a pure substance, vapour pressure – temperature curve, vapour gas mixtures, definition and derivations of relationships related with humidity, fundamental concept of humidification. Dehumidification and water cooling, wet bulb temperature, adiabatic and non-adiabatic operation, evaporative cooling, classification and design of cooling towers. 7

Unit –IV

Drying

Solid-gas equilibria, definitions of moisture contents, types of batch and continuous dryers, rate of batch drying, time of drying, mechanism of batch drying, continuous drying. 4

Unit –V

Crystallization

Equilibrium yield of crystallization, heat and mass transfer rates in crystallization, theories of crystallization. Classification and design of crystallizers. 4

TPT-601: FORMULATION AND MANUFACTURING OF SURFACE COATINGS

L : T : P

3 : 1 : 0

Unit-I

Principles of paint formulation, formulation elements, mathematics & steps: PVC, CM, P/B ratio, Sp gravity, etc; Typical formulations of primers, undercoats and finish coats industrial and site applied coating for steelwork under mild, moderate and severe conditions. 08

Unit II

Steps in paint manufacturing, Phenomenon of wetting, grinding and dispersion important considerations in pigment dispersion, Important considerations in pigment dispersion rheology. 06

Unit-III

Heavy duty mixtures; double blade mixture W & P banding, sigma kneaders pug mills, dough mixers, change can, planetary Z blade, cavitation mixers, edge runner roller mills, different variants, material balance power inputs and mill base composition for three roll mill; Ball, pebble and bead mills; cascading & factors affecting effectiveness of milling such as size and speed of mill, volume a composition and size and shape of grinding medium, mill base, attritors and vibration mill; Sand mill: type of grinding media sand grinding process efficiency of mill, Horizontal sand mills like dyno mills pearls mills etc; Miscellaneous mills; colloid mills, high speed stone and impingement mills kady mills etc. 12

Unit-IV

Mill base let down source of let down trouble, optimum let down condition, letdown of non aqueous and latex paints, fire and health hazards, general industrial hazards, prime cause fire and explosion precautionary measures. 08

Unit V

Safety measures protection; factory layout principles and general considerations, typical flow diagram, single and multi storeyed building, sections of a paint factory and their location, 06

Reference Book

1. Organic Coating Technology, Vol, I & II by H.F. Payne
2. Surface Coatings, Vol, I & II by, OCCA, Australia
3. Outlines of Paint Technology by W. M. Morgan
4. Paint Flow and Pigment Dispersion by T.C. Patton

TME- : MACHINE DESIGN

L : T : P

3 : 1 : 0

Unit-I

Introduction to the methodology of Engineering design; Design circle for a product/ system; Important considerations in design; Formulation of design concepts; Miscellaneous considerations like wear, environmental, human and aesthetic aspects; Ergonomics considerations. 8

Unit-II

Estimation of design load under static and dynamic conditions; Design for safety; Stress concentration and its effect and its prevention; Consideration of creep, fatigue and thermal stresses in design. 8

Unit-III

Material selection in design; Important engineering materials- Their classification and properties; Elementary idea of rubber, plastic ceramics and composites; Advantages over conventional metals and alloys. 8

Unit IV

Design of power transmission systems- belt, pulley and shafts; Design of riveted and welded joints; Design of keys, couplings, lever and brackets. 8

Unit-V

Design of pressure vessels- thick and thin cylinders, pipe and joints; Elementary ideas and importance of computer aided design; Basics of computer graphics - general introduction to AutoCAD. 8

TPT-602 : COATING PROPERTIES, EVALUATION AND QUALITY CONTROL

L : T : P

3 : 1 : 0

Unit I

General properties of oil paints, enamel varnishes and lacquers, their comparative merits, classification of paint properties adhesion and cohesion properties, factors affecting adhesion wetting power, optical properties; colour, gloss, hiding etc, physical, chemical and mechanical properties of paint films factors affecting coating properties rheological properties, Newtonian and non Newtonian liquids, thixo-tropy, factors affecting viscosity, influence of the rheological behaviour; 12

Unit-II

Objectives of paint testing, quality control procedures, Standard specifications and test methods classification of paint tests and evaluation tests, Test on liquid paints density, dispersion, viscosity and consistency, wet opacity and dry hiding, spreading capacity and spreading rim wet and dry rim thickness, drying time etc, 08

Unit-III

Tests of dried coatings, colour and colour fastness, light fastness, gloss, flexibility, adhesion impact test, hardness mar resistance, abrasion resistance water and moisture resistance; water vapour transmission, PAC and salt spray test resistance, to chemicals, resistance to lubricating oils and solvents, resistance to heat and fire air permeability etc; evaluation of water based paints, biological effects on paint films. 08

Unit IV

Analysis of paints and varnishes; volatile and nonvolatile matter pigment content, binder or solid vehicle content, water content, ash content, pigment binder and solvent analysis. 06

Unit V

Ageing properties of coatings, weatherometry, natural outdoor durability test accelerated outdoor weathering, artificial weathering test in a weatherometer defects observed in paint film on exposure; concept of quality circles, introduction to ISO. 06

Reference Book

1. Organic Coating Technology, Vol, I & II by H.F. Payne
2. Surface Coatings, Vol, I & II by, OCCA, Australia
3. Outlines of Paint Technology by W. M. Morgan
4. Testing of Organic Coatings by Norman I. Gaynes
5. Paint Testing Manual-Gardener

CH-655 : CHEMICAL ENGINEERING OPERATION LAB

L : T: P
0 : 0 : 3

1. Studies on Jaw Crushers, Hammer mill, Ball Mill, Crushing Rolls
2. Screen Analysis
3. Pressure Drop studies in pipe fittings
4. Studies on Rotameter, Orifice meter, venturi meter and V – Notch.
5. Studies on sedimentation and filtration.
6. Studies on Heat Exchangers viz. Concentric pipe heat exchanger, Shell and tube heat exchanger.
7. Studies on Single effect/ Multiple effect evaporators.
8. Studies on Bubble cap/ tray/ fractional column.
9. Studies on Absorption/ Humidification/ Dehumidification columns.
10. Studies on extraction column.

TPT-651: TESTING & QUALITY CONTROL LAB

L : T: P
0 : 0 : 6

Determination of the physical properties of paints, varnishes & lacquers such as colour, wt/10 litre, fireness of grind, non volatile viscosity D.F.T. Drying time P/B ratio. Etc. Determination of the mechanical properties of paints, varnishes & lacquers such as pencil hardness, impact resistance, flexibility & adhesion, scratch hardness, etc. Determination of the optical properties of paints, varnishes & lacquers such as floss, light fastness, wet opacity etc. Determination of the chemical properties of paints, varnishes and lacquers such as water resistance acid resistance, alkali resistance solvent resistance, PAC (Protection against corrosion) Test, Accurated weather resistance etc.

TFT-652 SEMINAR

L : T: P
0 : 0 : 3

The student will be required to prepare and deliver a seminar as well as submit a written report on the topic assigned to him/her

PT-701: PRINTING INK TECHNOLOGY

L : T: P
3 : 1 : 0

Unit-I

Major printing systems: principles of printing, description and schematic diagram e.g. Typographic, Planographic, Gravurs and screen process, Classification of printing inks, Mechanism of ink drying, colour matching and process printing 08

Unit-II

Testing and evaluation of raw materials for their use in ink manufacturing. 04

Unit-III

Principles of ink formulations and characteristics of various types of process ink e.g. Letterpress, offset, lithographic, gravure, flexographic and screen inks, inks for various sub-strates e.g. paper, plastic, febric, leather, glass and metal. 10

Unit-IV

Inks for, Newspaper, publication work, posters, labels and packaging materials, heat set and quick set inks for multicolour printing. Metal decorating inks, overprint varnishes and lacquers, magnetic inks, ceramic inks, inks for printed circuit boards, and other miscellaneous inks; water based inks. 10

Unit-V

Printing ink manufacture : different methods and machinery used laboratory equipments and ink testing. Factory layout, hazards and precautions; various ink troubles and remedial measures. 08

Reference Book

1. Printing Ink Manual by R. H. Leach & R. J. Pierce
2. Ink Technology for Students & Printers by E.A. Apps

TPT-702 : SURFACE TREATMENTS AND APPLICATION TECHNIQUES

L: T : P

3 : 1 : 0

Unit I

Objective of surface preparation and the phenomena mechanical surface preparation and cleaning power tool cleaning, flame cleaning, blast cleaning etc, chemical surface preparation solvent wiping and degreasing, alkali cleaning, emulsifiable solvent cleaning steam cleaning, acid cleaning; pickling; phosphoric acid, electrolytic pickling etc, 08

Unit-II

Chemical paint removal such as alkaline and solvent type removers etc. pretreatment chemical conversion coatings based on zinc magnese iron and chromium etc. cromate and other treatments substrates and their specific preparations classification and substrates surface preparation of metals, timber masonry plastics etc.Previously painted surfaces 08

Unit-III

Common application techniques importance of rheological behaviour in paint application, brush application conventional air spray, airless spray. Hot spray duel component spray electrostatic handgun and high speed disc systems dipping; roller and coil coating, powder coating, electrodeposition principle throwing power operating parameters control system, anodic and cathodic deposition, anodic/cathodic deposition commercial ED installation, miscellaneous application techniques vacuum impregnation; curtain coating, , flow coating; silk screen slush coating, knife coating, calendar coating; centrifugal coating, etc, 10

Unit IV

Curing of wet film paint shop services paint shakers or tumblers, paint & distribution system west treatment paint shop troubles inspection and service complains finishing of specific items motor body refrigerator and domestic appliances, machinery and casting etc. 06

Unit-V

Paint defects sources classification defects in the liquid paint defects during application defects during drying or curing defects in the dry film in use causes and rectification of defects and preventive measures refinishing and maintenance finishing. 06

Reference Book

1. Organic Coating Technology, Vol, I & II by H.F. Payne
2. Surface Coatings, Vol, I & II by, OCCA, Australia
3. Outlines of Paint Technology by W. M. Morgan
4. Good Painting Practices by Joseph Bigos

TCH- : INSTRUMENTATION AND PROCESS CONTROL

L : T: P

3 : 1 : 0

Unit-I

Elements of measurement , functions and general classifications of measuring instruments. Indicating and recording type of instruments. Elements of measuring instruments,static and dynamic characteristics of measuring instruments. 6

Unit-II

Principle of operation, construction and application of important industrial instruments for the measurement of temperature, flow, liquid level and composition. 10

Unit-III

Dynamic behavior of first order, second order and two or more first order systems in series. 10

Unit-IV

Block and physical diagrams of control system. Open and closed loop control systems.

Characteristics of measuring elements, controllers and final control elements. Mods of control actions. (08 lectures)

Unit-V

Response of closed loop control systems for various kind of control actions and measurement lag. 6

TCH-707: CHEMICAL REACTION ENGINEERING

L : T: P

3 : 1: 0

Unit-I

Chemical Reactions : Rate of chemical reactions, variable affecting the reaction rate, order of reaction , reaction rate constant , elementary and non-elementary reaction mechanism. Arrhenius equation, Collision theory and theory of absolute reaction rates, predictability of reaction rate. 8

Unit-II

Kinetics of homogeneous chemical reactions, rate equations for simple and complex reactions, irreversible reaction, parallel reactions,consecutive reactions, auto catalytic reactions and homogeneous catalytic reactions. 8

Unit-III

Interpretation of reactor data in constant volume and variable volume batch reactions, integral and differential method of following kinetic data. 6

Unit-IV

Classification of chemical reactions, Interpretation of reactor data in flow reactions. Reactor designs for homogeneous, batch, semi-batch, plug flow and continuous stirred tank. Electrochemical reactors. Isothermal as well as non-isothermal operation, space velocity and residence time in flow reactors. Size comparison of single reactors like batch, plug flow and CSIR for first and second order single reactions. Multiple reactor systems, Plug flow reactions in series and for parallel equal sized CSTR's in series. 10

Unit-V

Catalysts: Preparation, activity and the factors which influence it. The effect of physical properties such as surface area and pore size etc. on catalyst activity, methods of determination of their physical properties, catalyst poisoning, Biocatalysis. Heterogeneous catalytic reactions, principles, absorption isotherms, kinetics of solid catalysed fluid reactions, rate-controlling steps.Use of computers in designing, modeling, optimization and simulation of chemical process. 8

TOE- 38 : OPEN ELECTIVE- PAINT TECHNOLOGY

L : T: P

0 : 0: 3

Unit-I

Paints and their general ingredients, function of ingredients and classification of paints. 06

Unit-II

Raw materials of Paints like drying oil boiled oils, natural and synthetic resins. 06

Unit-III

Extends and prime pigments and additives.

Unit-IV

Formulation and manufacture of paints and machinery used in paint manufacture. Formulation and manufacture of varnishes and lacquers.

Unit –V

Surface preparation and treatments, decorative and industrial coating, latest types of surface coating and their advantages. Application techniques and common paint defects safety & health hazards in paint industries.

TPT-751: DECORATIVE & INDUSTRIAL COATINGS LAB

L : T: P

0 : 0: 3

Preparation & testing of French polishes, copolymer varnishes, synthetic resin varnishes, bitumen varnishes stoving black, al insulating varnish and lacquers.

Development of different paint shades. Preparation and testing of drying distemper.

TPT-752: PROJECT

L : T: P

3 : 1: 0

The student (s) will be required to search literature pertaining to design of an equipment / processing of a food commodity / production of food product, comprehend it and prepare a report for assessment.

TPT-753 : INDUSTRIAL TRAINING

L : T: P

0 : 0 : 3

The student(s) will be required to undertake training in the food industry after III B. Tech.VI semester for a specified period and submit its report after completion for evaluation and oral examination in the VII semester of his studies in Final B.Tech.
